

1990 Unregulated Sites

Master List

Also
List of
Regulated
Sites

This master list of unregulated sites was compiled by Ohio EPA's Division of Emergency and Remedial Response, Remedial Response Section. It is a State version and expansion of U.S. EPA's CERCLIS database developed to ensure investigations of alleged hazardous substance sites. However, Ohio EPA does not warrant this to be the total universe of hazardous substance sites. We anticipate additional site discoveries as our program develops.

Background

Superfund, the popular name for the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, provides the mechanism to address "abandoned" hazardous waste sites. It constitutes a major milestone in environmental protection and remediation as it not only defines "hazardous substances", but imposes retroactive liability provisions upon the generators, transporters, and others, who often times had disposed of wastes in accordance with all then-existing environmental regulations. It also provides the "Superfund" to remediate the nation's worst sites should the identified responsible parties fail to do so.

Section 103(c) of CERCLA, a one time reporting provision, required every person who owned or operated a facility where hazardous substances had been stored or disposed and which were not permitted under the Resource Conservation and Recovery Act (RCRA) to notify U.S. EPA of the existence of the facility by June 9, 1981. U.S. EPA used this information to create an inventory of potential problem sites. This list evolved into the Emergency Remedial Response Inventory System (ERRIS), which currently is known as CERCLIS, the Comprehensive Environmental Response, Compensation and Liability Information System.

The preliminary assessment (PA) is the first step in the investigative process, described in the Code of Federal Regulations (CFR), Part 300 of the National Contingency Plan (NCP). The NCP outlines the steps which must be taken to respond to sites needing immediate removal or remedial actions. The preliminary assessments Ohio EPA has completed serve to screen sites in need of further investigation to determine if hazardous substance problems exist.

Most of Ohio's CERCLIS sites have been assessed. A federal grant was received in 1983 to complete PAs. Ohio has continued to complete assessments for the past six years and recently received federal funding for Federal Fiscal Year 1990 for this ongoing process.

Assessments were prepared by staff in Ohio EPA's five district offices to ensure that all file information as well as that known by the office staff could be presented in the assessments. The documents were routed through the central office for quality assurance and administrative purposes prior to being forwarded to U.S. EPA and identified owners or operators. The PAs are considered public information.

Ohio EPA determined that sites posing any threat to the environment or populations would be a State priority for additional investigations. If available information indicated hazardous conditions were potentially affecting people, Ohio EPA considered the site to be "medium" priority; those with known hazardous conditions were prioritized "high". The "low" priority sites have little evidence to indicate a problem exists and "zero" priority sites have been found not to be a hazardous substance problem. A blank space indicates the PA has not been completed.

Ohio EPA assigned a secondary priority rating to most of the listed sites. This rating is used to ask U.S. EPA to assign a contracted Field Investigation Team (FIT) to perform follow-up site inspections. The FIT priority ratings include: high, medium, low, no further action, and "Yes" for site inspection. Ohio EPA assigns each site to one of these categories based on the site's likelihood to score near or above the National Priority List cutoff point. U.S. EPA considers Ohio EPA's FIT priority request, but ultimately prioritizes additional activities at its discretion. THESE PRIORITIES REFLECT THE POTENTIAL FOR HAZARDOUS SUBSTANCE RELEASE TO THE ENVIRONMENT AS INITIALLY EVALUATED.

The investigative process continues after the PA as warranted, following the NCP. The subsequent step is a Site Inspection (SI), which should include generation or analytical information. The SI-generated analytical information combined with a more thorough understanding of populations potentially at

KN ☐

risk provides a means to further screen and prioritize additional investigations. The comprehensive problem evaluation and remedy selection is completed by way of a remedial investigation/feasibility study (RI/FS).

In many instances Ohio EPA, U.S. EPA or potentially responsible parties have generated additional information to more fully characterize these sites. In some instances, site conditions have been improved through the initiative of the owners or other identified responsible parties. This list does not report such interim activities.

U.S. EPA will provide funding or manpower only for further investigations at sites with the potential to score near or above the Hazard Ranking System (HRS) cutoff. The current HRS, which is described in

40 CFR, Part 300, will be revised soon. Federal funding is expected to address only a portion of Ohio sites. Ohio EPA recently released a funding study which estimates it will cost up to six billion dollars to clean up hazardous waste sites in Ohio which do not warrant federal funds.

This list includes approximately 1100 actual sites. Several sites have multiple aliases. The list includes the U.S. EPA and Ohio EPA identification numbers; site name and address; the Federal or FIT priority; the State priority; and if the site is on CERCLIS or a duplicate listing. (Several abbreviations noted : SIA - Surface Impoundment Assessment; AKA - Also Known As; ILA - Initially Listed As).

Ohio EPA's Division of Emergency and Remedial Response will provide annual updates of this list.
